**General Duty Clause, 29 USC 654, section 5(a)(1) requires that employers protect their employees from recognized hazards.**

“Each employer shall furnish to each of his employees employment and a place of employment which are free from recognized hazards that are causing or are likely to cause death or serious physical harm to his employees.”

Additionally, the coronavirus is not listed as an exception to recording an occupational illness in 29 CFR 1904.5(b)(2). This means that if an employee contracts COVID-19 from another employee or through occupational exposure on a cleaning job, the illness is recordable on the OSHA log for that business. If it results in job restriction, days away or fatality, this is also required to be recorded.

There's a requirement to contact OSHA to actually REPORT a fatality or hospitalization if it is from Coronavirus.

**In the case of a death, an OSHA inspection and investigation would follow and could result in a fine if the company didn't take measures when they knew about it and should have.**
